CORRECT USE

1. When placing ingredients into the jar put the soft ingredients in first followed by the denser ingredients. If ice or food sticks to the blade, stop the machine, remove the jar from the base. Remove the food from the jar and blade. Once clear replace the food and continue blending / juicing.
2. When combining ice with other ingredients use small blocks rather than large blocks as this will preserve your machine.
3. For low fibre high water content fruit, vegetables and leaves; blending / juicing can be done without adding additional water. e.g. watermelon, grapes, tomatoes, etc.
4. For high fibre low water content fruit, vegetables and leaves; blending / juicing add 200cc - 300cc of water (water should just cover the ingredients) . e.g. carrots, apples, kale, etc.
5. During operation, please do not put much food in once. Place the food with half jar and 200cc- 300cc water. You can add water to liquify after blending if necessary to make the healthy juice.
6. When blending Sorbet, please use the PULSE button.
